

You must write a program in JAVA to generate 3 rest APIs

1- if you call this URL in browser you must see all persons list in JSON format

<http://localhost/user/all>

2- if you call this URL in browser you must see person information in JSON format

<http://localhost/user/info/{userId}>

3- if you call this URL in browser you must see person image

<http://localhost/user/image/{userId}>

The program is supposed to be written by Spring boot framework.

Establishing database connection is not necessary, you can use a hard-coded array as data source.

Generate user data fields by your own. Small sample size users' list is acceptable(2-3).
